

XXIV Conference of Lightweight Structures in Civil Engineering Łódź, December 7th 2018

Lightweight Structures in Civil Engineering Conferences are a series of annual international conferences, which have been organized by Polish leading Universities.

The aim of the Seminars is to bring together researchers and professionals from different countries and to provide opportunity to present results of their work.

Conference main topics include: engineering objects erected with relatively small amount of used material like large span roofs, bridges, high buildings, towers, masts, free volume buildings, tanks or reservoirs. Thematic sessions are dedicated to spatial lattice structures, plate and shell structures, domes and membranes, thin-walled, tension, cable and pneumatic structures. Also all methods of analysis as: analytical, numerical and experimental are welcomed.

Important dates:

- August 1st – submission of the one page abstract
- August 15th – initial approval of abstracts
- October 20th – full paper submission deadline

We are looking forward to receiving your abstract and meeting you in Łódź.
